Filter King is a true microscopic cooking oil filtration machine that will extend the life of your cooking oil by 50% or more while giving you consistently great fried food 7 days a week for your restaurant. This simple-to-use and easy-to-store mobile system removes crumbs as well as microscopic sediment from the oil, which, if left unattended, will irreversibly degrade the oil.

Filter King is a commercial-grade stainless steel filter with American parts and labor, a 1/3 HP motor, and a 5 gal per minute reversible pump. Before returning to the fryer, the cooking oil passes through two patent-pending filter systems that force and seal every drop through a microscopic filter process. We call this process the, "Double forced & sealed filtration process" which is the science behind our technology making it vastly different than many other machines in today's market.

Oil Filtering Machine Advantages –

- SAVE 50% OR MORE ON COOKING OIL By polishing and filtering the oil to a microscopic level!
- SAVE TIME AND MONEY WHEN FILTERING YOUR OIL. You will be able to filter in 4 minutes per fryer & save hours in labor.
- SAFELY DISPOSES OF YOUR USED HOT COOKING OIL!
